

SIGN soldering kit

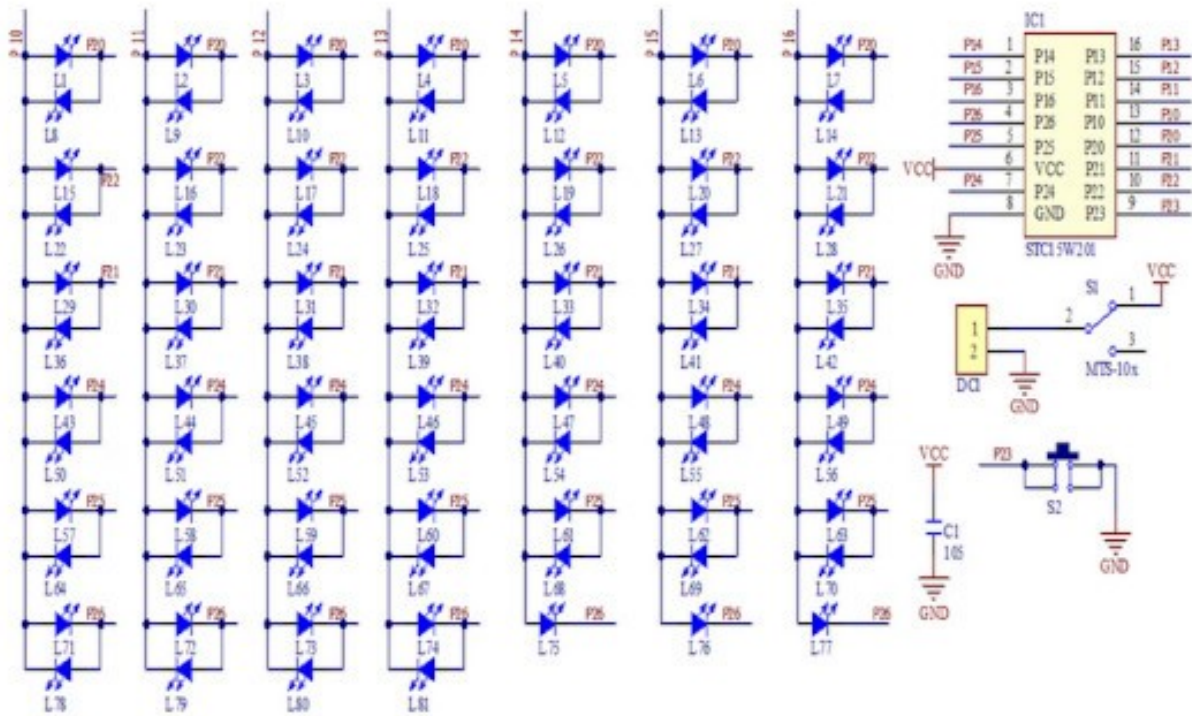

Necessary tools:

Wire Cutters: we recommend [PGC-TR25](#) they are sharp and light
Twizzers: we recommend [PGC-00SA](#)
Soldering iron: [CHN-SLD802](#) is budgeted solution, SLD-FAST-75W is professional solution
Soldering wire: we recommend [Solder-Wire-SAC0307-0-8](#)
Colophony:

General tips for soldering:

1. Switch On the soldering iron, setup the working temperature to 350 C. Wait until the Soldering Iron reach this temperature – there is LED indicator which will pulse when the temperature is reach.
2. Before soldering clean the Soldering tip with wet sponge from the black resedues.
3. Never touch the heated soldering tip or body.
4. Do not leave the Soldering Iron unattended.
5. Be careful to not touch cables, table, cloths with the soldering iron heated body or tip.
6. Place the electronic component on it's place, watch out if there is polarity.
7. Touch the component pad which you want to solder and wait 3-4 seconds to heat up.
8. Feed a little from the soldering wire until the component lead is flooded with tin and it's shinny and glossy.
9. If the soldering is not shinny but dull please re-solder with colophony.

SIGN schematic:

Components without polarity:

C1 - 0.1 uF small brown disks

S1 – power on off switch

S2 - push button

Components with polarity:

LED1..LED81 - red LEDs longer leg is in the square pad

IC1 – follow the silkscreen the pin.1 is with dot on the IC body
